Frontend Engineer with 4+ years of experience building scalable React and TypeScript applications in fintech and enterprise SaaS platforms. Strong expertise in component architecture, state management, performance optimization, and data-intensive UI development. Experienced in owning complex frontend features, collaborating cross-functionally, and delivering fintech and enterprise products.

CORE SKILLS

- **Frontend:** React.js, TypeScript, JavaScript (ES6+), Redux Toolkit, Zustand, Next.js, HTML5, CSS3, Sass
- **UI & Visualization:** AG-Grid, D3.js, Chart.js, React-Google-Charts, Material UI, Ant Design, Tailwind CSS
- **Backend & APIs:** REST APIs, basic Node.js, API integration
- **Testing:** Jest, Vitest, React Testing Library (unit & component testing)
- **Tools & DevOps:** Git, GitHub, Vite, Webpack, Parcel, Postman, CI/CD
- **Cloud & Platforms:** AWS, Azure, CI/CD, Docker
- **Concepts:** System Design, Performance Optimization, SOLID Principles, Clean Code
- **Methodologies:** Agile/Scrum

PROFESSIONAL EXPERIENCE

Frontend Developer II — JLL Technologies (Chick-fil-A RELM Project) | Mar 2025 – Present

- Designed and implemented frontend architecture for an enterprise platform, standardizing project structure, state management, and UI patterns, enabling scalable development and consistent UI delivery across teams.
- Built and optimized **data-intensive dashboards** using **AG-Grid**, significantly improving rendering performance, navigation flow, and usability of 80%.
- Integrated **Doughnut** and **Bar charts** using React-Google-Charts and implemented **FullCalendar** for task and event tracking, improving workflow transparency and operational visibility by 20%.
- Applied advanced performance optimizations including **lazy loading**, **code splitting**, and **virtual scrolling**, reducing bundle size and improving page load times by 10%.
- Contributed to approximately 60–70% of frontend development, ensuring maintainable architecture, reusable components, and consistent UI standards.
- Led code reviews, enforced coding standards, and mentored junior developers, improving code quality, consistency, and maintainability across the frontend codebase.

Software Engineer — Qapita Fintech India Pvt. Ltd. (QapMap Project) | Jan 2022 – Mar 2025

- Designed and launched the Pool feature, enabling 80% client migration from a legacy platform and driving product adoption.

- Architected **AG Grid**-based workflows for complex cap-table systems, improving scalability and cross-team UI reuse of 40%.
- Migrated legacy charts to a **D3.js-based** visualization framework, improving analytical clarity and interaction depth by 30%.
- Built a **Storybook-driven** reusable component library, reducing UI development time by 40% and improving design consistency.
- Optimized frontend performance by 10% through profiling, **code splitting, memoization, and efficient state management (Redux Toolkit/Zustand)**
- Introduced React Query for server-state management, improving data fetching efficiency, caching, and reducing unnecessary API calls by 5%.
- Refactored legacy codebase by removing dead code and modularizing components, improving maintainability and reducing technical debt by 20%.
- Implemented unit and component testing using **Vite and React Testing Library**, improving code reliability and reducing regression issues.
- Served as frontend SPOC for complex cap-table workflows, collaborating with backend and product teams to define UI architecture, API contracts, and data flows.
- Actively contributed to Agile processes, sprint planning, and LLD discussions, improving delivery efficiency by 20%

ACHIEVEMENTS

2nd Place – Internal Company Hackathon

- Won 2nd rank for building “Sharthi,” an AI-powered chatbot using React and LLMs, demonstrating rapid prototyping, UI architecture, and AI integration skills.

EDUCATIONAL BACKGROUND

B.TECH IN COMPUTER SCIENCE

DR. APJ ABDUL KALAM TECHNICAL UNIVERSITY

2013-2017

Lucknow, Uttar Pradesh
